

eUnique's WORKSHOP & PROCESS

complete colour ltd

Each unique piece is beautifully handmade by artists from the islands of the Philippines, using crushed stone, aluminium and brass; and natural fibres such as elephant grass, jungle vines and barks.

Fertile forest soils and favourable growing conditions mean that the natural fibres used in our products are effectively renewed through natural regeneration. Our products are handmade by artists from the islands of the Philippines.

Honesto collects bamboo from the jungle.

Bamboos are the fastest growing plants in the world. They are capable of growing up to 60 centimeters (24 in.) or more per day due to a unique rhizome-dependent system. This astounding growth rate is highly dependent on local soil and climatic conditions, both of which are present in our jungles.

Many natural fibres such as jungle vine, langgi twig and elephant grass are used to make our products.

eUnique's WORKSHOP & PROCESS

complete colour ltd

Local artist, **Ramil** applies the various fibres such as coco trunk and elephant grass in a process that can take many hours.

The different finishes can mean more than 20 separate procedures to each piece as it moves in and out from the various sections.

Iska checks that all the jungle vine are smooth prior to coating

Ligaya does final sanding of a piece to make ready for **Bayani** in the paint shop.

Local artist, **Bayani** applies the water based paint in the first step of the coating process.
